AIR CONDITIONING AND INDUSTRIAL APPLICATION

# Air cooled chillers with screw compressors and axial fans

The air cooled chillers of **RAH series** are extremely compact units so to reduce the installation spaces and weights. They are designed for outdoor installation and are particularly suitable for industrial applications. Thanks to the several options available, these units are particularly flexible and can be easily adapted to all installation sites. These units are completely assembled and tested in the factory and supplied with refrigerant and non-freezing oil charge. Therefore, once on site, the units only need to be positioned and electrically and hydraulically connected.

## Operation limits (standard unit)

- AIR : from 15 to 45°C
- WATER (out from evaporator): from 5 to 15°C

## Available versions

- K/Ka - standard version
- S.K/ Ka - silenced version: oversized coil, reduced air flow, fans with a lower rotation speed, cabinet on compressors, insulated by means of soundproofing material
- U.K/Ka - ultra-silenced version: oversized coil, reduced air flow, fans with a very low rotation speed, cabinet on compressors insulated by means of soundproofing material with bituminous rubber coating, vibration dampers on compressors suction and discharge pipes, mufflers on discharge pipes, compressors fixed on spring-type vibration dampers

## Main components

Modular **frame** made of galvanized and RAL 7035 painted steel profiles and base-frame in painted steel, suitably treated to resist to external agents. The compressors and the main components are suitably placed in the technical partition, completely at sight.

Semi-hermetic **screw compressors** equipped with capacity steps, motor thermal protection, oil crankcase heater and phase monitor. The compressors lubrication is of forced type, with no pump and in order to prevent many oil migrations to the cooling circuit, the compressors are provided with an oil separator, in-built to the discharge side. The electrical motor is foreseen for lower inrush current and, in this case, the unit is equipped with an automatic partial load inrush device and mechanical interlock of the inrush control switches, to prevent accidental short circuits (options DS and PW).

Dry expansion **shell & tube evaporator**, 100% counter-current type with two refrigerant circuits and one water circuit, with very low pressure drops. Shell and tubes plate made in carbon steel and copper tubes, insulated by close-cell polyurethane foam material. Some plastic and corrosion-proof baffles are suitably placed inside the shell, allowing a correct water distribution and making the tube bundle particularly strong and vibration-free, also in case of very high water flows.

Heat-exchange **external coil** with copper tube and specially corrugated aluminium fins for a better efficiency. It is suitably sized with a wide exchange surface, so to allow the unit operation also at very high external air temperatures.

Thanks to their "V" positioning, also increasing the total efficiency, the overall dimensions are particularly compact. On request, in case of installation in aggressive environments, several coil protection treatments are available.

Low rpm **axial fans**, of directly coupled type, with 6-8 pole electrical motor complete with in-built overload protection, electronic balance, low sound level blades with wing profile and safety protection grid.

**Cooling circuit** composed of thermostatic expansion valve, dehydrating filter, sight glass, high pressure safety device, antifreeze thermostat, high and low pressure switches, high and low pressure gauges, non-return valve on discharge side, shut-off valve on liquid line, shut-off valve on compressor discharge side.

**Electric board** in compliance with CE norms, contained in a suitable partition protected by the internal safety panel, provided with a lock-door main switch. Inside, it is complete with all control and protection switches, the terminal board and auxiliaries. The electrical board also includes the control device for power supply phases, to prevent the compressor to turn in the wrong sense. The microprocessor, complete with display, is also placed inside the electrical board.

Unit management **microprocessor** installed on the internal safety panel of the electrical board, controlling the chilled water temperature regulation, the working parameters, auto-detection failure system, remote management and supervision, complete with compressors hour counter.

## Available options

**A - Amperometer:** Electrical device for measuring the intensity of electrical current absorbed by the unit.

**AE - Electrical power supply different from standard:** mainly, 230V triphase, 460V triphase. Frequency 50/60 Hz.

**BT - Low temperature operation (-20°C):** electronic device for the continuous voltage control of the condensing pressure through the variation of the fan rotation speed.

**CE - UV protection on water insulation:** particular coat of the evaporator and of water insulations with UV ray proof material.

**CF - Soundproofed compressors cabinet:** Insulation of compressors by a cabinet coated with soundproofing material and vibration dampers under compressors (already included in S version).

**CFU - Soundproofed compressors cabinet with bituminous rubber coating:** Insulation of compressors by a suitably coated cabinet, vibration dampers under compressors, mufflers on compressors discharge pipes (already included in U version).

**CS - Compressors inrush counter:** Electromechanical device positioned inside the electrical board, recording the total inrush starts of compressors.

**DS - Star/delta:** electric device of close transition type to reduce the inrush current, complete with short circuit safety by mechanical interlock.

**GP - Condensing coil protection grid:** metal protection grid against accidental impacts, made of 50x50 4-mesh wire.

**GP1 - Protection grid for compressors section:** metal protection grid against accidental impacts.

**IG - Watch card:** Electronic card to program the switch-over and rotation between to units, after a pre-set time.

**IH - RS 485 serial interface:** electronic card to be connected to microprocessor, to allow communication between the units and a CAREL supervision system. It is possible to fully control the unit from remote. For connection to other supervision systems, the protocol of the controlled parameters is available on request.

**IM - Seaweed packing:** fumigated seaweed case and protection bag with hygroscopic salts, suitable for long sea transports.

**LI - Liquid injection:** mechanical device allowing a better cooling of compressors at very high compression level (standard for R407C).

**M6-M25 - Modulating capacity control:** by means of some valves installed on compressors, depending on their quantity, the capacity is modulated from 6 to 100%.

**MV - Buffer tank:** of suitable capacity complete with expansion vessel, safety valve, water gauge, water charge and discharge valves, air purging valves.

**OS - Oil flow safety switch:** in-built in the compressor oil separator, it indicates the eventual decrease of the oil level.

**PF - Safety water flow switch:** installed on evaporator, it switches off the unit in case of lack of water flow rate through the evaporator.

**PM - Spring-type vibration dampers:** spring-type vibration dampers support, for insulating the unit (supplied in kit), mainly indicated for installation in difficult and aggressive environments. Made of two steel plates containing a suitable quantity of harmonic steel springs.

**PQ - Remote microprocessor:** remote terminal, allowing to display the temperature and humidity values detected by probes, the alarm digital inputs, the outputs and the remote ON/OFF of the unit, to change and program of the parameters, the sound signal and the display of the present alarms.

**PW - Part-winding:** equipment for step compressors starting, reducing of about 35% the inrush current of each compressor.

**RA - Anti-freeze heater on evaporator:** electrical heater installed on the evaporator, in order to prevent freezing and provided with thermostat.

**RF - Power factor correction system cosfi > 0,9:** Electrical device made of suitable condensers for compressors rephasing, ensuring a cosfi value  $\geq 0,9$ , so to reduce the power absorption from the electrical network.

**RH - Shut-off valve on suction side:** they are used to isolate compressors during service operations.

**RL - Compressors overload relays:** electromechanical protection devices against compressors overload.

**RM - Condensing coil with pre-painted fins:** superficial treatment of the condensing coils with epoxy coating.

**RR - Copper/copper condensing coils:** special execution of the condensing coils with copper pipe and fins.

**TE - Electronic thermostatic valve:** it is requested to make a very accurate regulation of the refrigerant flow and to limit variations of cooling capacity and evaporator leaving temperature water during operation in transitions and for a better performance with fixed superheating.

**V - Voltmeter:** Electrical device measuring the electrical tension in the power supply of the unit.

**VB - Brine version:** unit suitable for working with evaporator outlet water temperatures lower than 0°C. A 20 mm evaporator insulation will be provided.

**VS - Solenoid valve:** electromagnetic solenoid valve on each cooling circuit to prevent refrigerant migrations and consequent flooding of compressors.
